

MARBLE RESTORE KIT	v.0	2013 07 01	
	v.1	2014 03 11	

MARBLE RESTORE AND POLISHING KIT

Package Contents

The package contains the following items:

n. 4 diamond plates in grits 200 # 400 # 800 # 1500 #

n. 1 buffer velcro backed

n. 1 bag 50grams of powder for polishing marble

Technical notes:

Diamond plates: mini plates size S dim. 4x4, 5x0, 3 cm. With diamond resin abrasive for sanding (200 grit orange, 400 grit red, green grit 800), polishing (1500 grit light green). The plates have the back with colored velcro to recognize the grain.

Buffer: block of soft plastic material velcro back hook size 4,2 x5x2 cm.

Polishing powder: special powder for polishing marble and carbonate stone. This is a special blend of professional powders that are used usually with heavy sanding machines; in the formulation contained in the kit also works hand. It must be used wet.

What is

The kit contains everything necessary to bring a smooth or rough surface until roughly mirror polishing. The kit also allows the novice to restore small areas of polished marble ruined by strong acids, scratches or scaling.

How to use

In relation to the damage to be repaired and the level of finish you want to get it pass onto the surface from two to four grains in succession.

To restore a polished marble ruined by scratches or severe corrosion begins with the plate # 200, continuing with 400 and 800 grit up to 1500 grit and then passing the polishing powder.

The diamond plates are used on wet surface rubbing in a circular motion with moderate pressure alternating repeated several times. Given a uniformly smooth area to go to the next grit until you reach the desired smoothing.

The polishing powder should be passed after the use of the patch # 1500 grit to get so perfect a real mirror polishing.

Where it works

It works on marble, travertine, limestone, compact sandstone is obtained the mirror polishing.

Where it don't work

On granite and siliceous materials you get a semi-matt polishing, as well as on non-porous stones to polish (tender tuffs, soft stone etc..).

In order to obtain the maximum polishing on granites very fine abrasives must be used, which are not included in this kit.
